Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                             (without alignments)
12.949 Million cell updates/sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1,

THIS PAGE BLANK (USE)TO)

CC The invention relates to a composition comprising a bioactive agent homogeneously dispersed in a targeted matrix (polymer and targeting consisted in a targeted matrix for use as a delivery consisted included are a targeted matrix for use as a delivery vehicle comprising a polymer associated with a targeting ligand, consonated the bioavailability of an agent comprising administration of the composition and treating cancer comprising administration of the composition. The method is useful for targeted delivery of a drug, especially in cancer therapy. The targeting ligand may be a peptide. Examples of targeting peptides are disclosed including cathepsin-D combatrate peptides, peptides targeting receptors in the brain and kidney, peptides targeting the RGD (Arg-Gly-Asp)-motif in, e.g., antibodies, competides targeting the angiogenic endothelium of solid tumours, tissue specific peptides (e.g. of lung, skin, pancreas, intestine, uterus, adrend adrend and retina), and cathonic cancer-targeting peptides. The present sequence is a peptide targeting ligand disclosed in the invention xx

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; adenoviral coat protein; non-native ligand; cell-surface receptor;
therapy; anti-tumour agent; tumour necrosis factor; cancer; brain; lung;
ovary; breast; prostate.
                                                                                                                                                                                                                                                          The present sequence is that of a peptide that acts as a ligand for the dPIIb/IIIa receptor. The invention relates to radiolabeled reagents that are scintigraphic imaging agents for imaging sites of thrombus formation in vivo. The reagents each comprise a specific binding compound, such as the present peptide, that is capable of binding to at least 1 component of a thrombus, and which is covalently linked to a radiolabel-binding moiety. A method for using such a reagent labeled with technetium-99m to image a thrombus site in a mammalian body is claimed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Adenoviral coat protein which permits production of adenoviral vectors that bind and infect host cells not naturally infected by adenovirus,
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The invention relates to adenoviral coat proteins comprising various non-
contive ligands. The invention provides a method of controlled gene
coxpression utilising selectively replication competence and also a method
and a composition for targetting an adenoviral vector. A system
comprising a cell having a non-native cell-surface receptor, and a virus
comprising a non-native ligand which binds the non-native cell-surface
creceptor of the cell is useful for propagating a virus and also for
assaying gene function. The system is also useful for isolating a nucleic
acid encoding a product comprising a desired property. Further the system
is useful for identifying functionally related coding sequences.
Cateropeutic agent such as anti-tumour agent, preferably tumour necrosis
therapeutic agent such as anti-tumour agent, preferably tumour necrosis
catedor and a second non-native nucleic acid encoding an agent that
catedor and a second non-native nucleic acid encoding an agent that
catedor and a second non-native nucleic acid encoding an agent that
canimal. The therapeutic agent can be useful for treating an
canimal. The therapeutic agent can be useful for treat cancer of the brain,
continued ingand attached to an adenoviral vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Targeting ligand; bloactive agent; polymer matrix; cancer; cytostatic; cathepsin-D substrate; peptides; neuroreceptor; adrenal receptor; fibronectin; vitronectin; integrin; RGD motif; angiogenic endothelium; tumour; cationic cancer-targeting peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Targeted delivery system comprising a bioactive agent homogeneously dispersed in a targeted matrix is especially useful in cancer therapy

```
This sequence represents a peptide ligand for the fibrin polymerisation site. The invention relates to a complex (A) for thrombus imaging comprises technetium-99m (Tc-99m) completed with a reagent comprising a peptide (P) with 4 to 100 amino acids sequence and a Tc-99m binding moiety covalently bound to (P). (P) is selected from a linear peptide ligand for a GPIIb/IIIa receptor not comprising the amino acid sequence argantatele, a peptide ligand for a polymerisation site of fibrin, and a cyclic peptide ligand for the GPIIb/IIIa receptor. The thrombus imaging reagents provided by the present invention can be used for visualising thrombi in a mammalian body when Tc-99m is labelled
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A complex used for thrombus imaging comprises technetium-99m complexed with a peptide ligand for GPIIb/IIIa receptor.
                                                                                                                                                                                                  Thrombus imaging, fibrin polymerisation site; technetium-99m; Tc-99m; GPIIb/IIIa receptor; cyclic peptide ligand.
                                                                                                                                                  Peptide ligand for fibrin polymerisation site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example 2; Col 13-14; 18pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to reagents (A) for preparing thrombus imaging agents comprising specific binding peptides (I) and a technetium-99m binding group (II) covalently attached to the specific binding peptide. (I) is a ligand for the GPIID/IIIa receptor and can be a cyclic or linear peptide not containing the Arg-Gly-Asp (RGD) sequence. (I) are specific for thrombi, and are small and therefore are rapidly cleared from blood and background tissue. (A) are used to produce scintigraphic imaging agents for detection of thrombi in vivo. The present sequence is one such TC-99m labelled peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

The invention relates to new thrombolytic agents which comprise a thrombolytic proteinase covalently linked to a targetting compound capable of specifically binding to a component of a thrombus. The thrombolytic agents can be used for eliminating thrombi in vivo in, myocardial infarction, cerebral ischaemia, deep vein thrombosis or myocardial infarction, cerebral ischaemia, deep vein thrombosis or used to image thrombi for diagnostic purposes. The thrombolytic agent can also be used to image thrombi for diagnostic purposes. The thrombolytic agents are specifically targetted to thrombus sites in vivo and have minimal hamaourhagic side effects and side effects related to non-specific protecolysis. The present sequence represents a specifically claimed targetting peptide. (Updated on 25-MAR-2003 to correct PI field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Reagent useful for preparing thrombus imaging agent - comprises peptide covalently linked to technetium binding moiety which is technetium labelled and binds to thrombus component.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Technetium-99M label; thrombus imaging; GPIIb/IIIA receptor; ligand;
                                                                                                         New thrombolytic agents - comprise thrombolytic proteinase covalent
linked to targetting compound for binding to component of thrombus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GPIIb/IIIa receptor ligand, with technetium-99M binding moiety.

The invention relates to peptides having specific binding specificity for fibronectin-binding and vitronectin-binding integrins, and in particular fibronectin-binding and vitronectin-binding integrin. The peptides can be used in a method of preventing integrin. The peptides can be used in a method of preventing integrin. The peptides can be used in a method of cells with a soluble peptide selected from the sequences shown in AAY21561, AAY21563 and AAY21586; or (b) contacting the cells with a soluble peptide comprising the sequence -NGR- selected from the sequences contacting the sequence shown in AAY21571. The peptides are useful for inhibiting metastatic process with which fibronectin adhesion is associated and also for inhibiting alpha v beta 1-mediated cell attachment to fibronectin, or inhibiting alpha v beta 1-mediated cell attachment to fibronectin, are also useful for promocting attachment to vitronectin. The peptides are also useful for promocting attachment to fibronectin. The peptides are also useful for promocting attachment to fibronectin.
                                                                                                                                                                                                                                                                                                    ö
                               The invention relates to a reagent for preparing a thrombus imaging agent. It comprises: (a) a specific binding peptide (BP) having a sequence of 4-100 amino acids; and (b) a technetium-99m binding moiety (TBM) covalently linked to the peptide which binds to a component of a thrombus. TBM forms an electrically neutral complex with technetium-99m. The small size of the peptide component of the reagent enhances blood and background tissue clearance and it is easy to prepare. This sequence represents a GPIDA/IIIa receptor binding peptide covalently linked to a
                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Integrin; fibronectin; vitronectin; extracellular matrix protein; metastatic; fibronectin adhesion; alpha5betal integrin.

The present sequence represents a synthetic peptide which acts as an antagonist to integrin receptors. The invention provides various synthetic peptides which act as cell adhesion modulators because they mimic extra-cellular matrix ilgands or other cell adhesion ligands that bind to receptors such as integrin receptors, including fibronectin, laminin, LFA-1, MAC-1, p150,95, vitronectin and gpIIb/IITa receptors. Some of the peptides contain the amino acid sequence Arg-Gly-Asp (RGD) Others contain non-RGD sequences, for e.g RCD sequences, and reverse useful in modulating cell adhesion, including adhesion related to fibronectin, as well as leukocyte adhesion to endothelial cells. They are prevention of diseases which relate to cell adhesion, e.g. adult prevention of diseases which relate to cell adhesion, e.g. adult
                                                                                                                                                                                                                                                                                            New cyclic peptide(s) and peptidomimetic compounds - are integrin receptor antagonists useful in modulating cell adhesion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Targetting peptide #45 useful as component of thrombolytic agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Thrombolytic agent; thrombolytic proteinase; blood clot; fibrin; thrombus; antithrombotic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ouery Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Peptides AAW03483-508 are examples of synthetic peptides generated to bind to the fibronectin/vitronectin-binding integrin alpha(5)beta(1). They are synthesised to contain the alpha(5)beta(1)-integrin peptide binding metifs: DGR, NGR or RGD. The peptides interfere with the binding of fibronectin and vitronectin to this integrin and thus may be used to block integrin-mediated cell adhesion to extracellular matrix proteins, esp. to inhibit tumour metastasis. The invention relates to reagents for scintigraphic imaging of a thrombus in-vivo, comprising (A) a specific binding compound capable of binding to at least one component of a thrombus, covalently linked to (B) a technetium-99m-binding moiety. Specific peptides constituting the reagents are claimed as new. The present peptide is one such peptide. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Reagent for scintigraphic imaging of thrombi with 99m technetium - comprises synthetic peptide which binds to thrombus covalently coupled to metal binding gp., rapidly cleared from blood and tissue.
                                                                                                                                                                                                                                                                   The peptide sequence is an example of a highly generic sequence contg. the RGD motif. Compounds contg, these lipid peptides are useful as cell migration inhibitors in cell adhesion membranes or cell culture bodies. See also AAR29048-54
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gp IIb/IIIa receptor ligand used in scintigraphic imaging of thrombi
                                                                                                   New synthetic peptide lipids or salts - useful as cell migration inhibitors, cell adhesion membranes and cell culture bodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Scintigraphy, thrombus, thrombi, imaging, specific binding, technetium-99m, radiolabelled, Gp IIb/IIIa receptor ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           h 100.0%; Score 35; DB 2; Length 5; Similarity 100.0%; Pred. The sequences given in AAR76185-200 and AAR79073-94 are high affinity integrin binding peptides which bind to various integrins. Peptides which bind to alphas/betal integrins contain the motifs given in AAR76185-86 and alphav/betal integrins are also contain the motif given in AAR76187. Alphav/betas integrins are also bound by RGD containing peptides. These peptides assume a conformationally stabilised configuration which is due to the formation of a disulphide bond, a peptide bond or a lactam bond. These peptides may be used for isolating the complementary integrin from a sample mixture by contacting them under ionic conditions to allow binding of the integrin to the peptide and then separating the integrin from the peptide. They can be used for attaching cells to a substrate, by binding when to the substrate with the cell. The peptides promote wound healing when applied locally and inhibit the attachment of osteoclasts to bone. They inhibit angiogenesis, metastasis of tumours and migration of smooth muscle cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                High affinity integrin binding peptides - can be used to attach cells to a substrate, inhibit the attachment of osteoclasts to bone, promote wound healing, inhibit angiogenesis, metastasis of tumours and migration of smooth muscle cells.
                                                                                                                                                                                                                                            High affinity; integrin binding peptide; alphas/beta1; alphav/beta5; alphav/beta3; RGD; stable configuration; wound healing; osteoclast attachemnt; bone; angiogenesis; metastasis; tumour; smooth muscle cell migration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          100.0%; Score 35; DB 2; I

To residue homocys1 is attached Acetyl and to residue Cys5 is attached NH2. The peptide is prepd. using standard methods of solid phase Synthesis and is one of 17 pref. examples of a highly generic formula. The peptide is used to inhibit fibrinogen-induced platelet aggregation and is partic. useful because it does not significantly deplete the platelet count. It has a relatively short duration of activity and is thus useful where prevention of platelet aggregation over a short period of time is desirable, e.g. in surgery of peripheral arteries and cardiovascular surgery. It is also useful in prevention of platelet thrombosis, thromboempolism and reocclusion either during and after thrombolytic therapy, or after angioplasty of coronary and other arteries and after coronary artery by-pass procedures, or to prevent myocardial confirmation. It may be combined with thrombolytic agents, e.g. plasminogen activators or streptokinase, or anticoagulants. See also AARIO413-18 and EP-410537, EP-410539, EP-410540, EP-410541, and EP-410767
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New fibrinogen receptor antagonising peptide cpds. - used to inhibit blood platelet aggregation during surgery on peripheral arteries and in cardiovascular surgery.
                                                                              Fibrinogen receptor antagonist; platelet aggregation; thrombosis; myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Synthetic; cell migration; inhibitor; cell adhesion membrane;

To residue N-MethylCysl is attached Acetyl and to residue Cys5 is attached OH. The peptide is prepd. using standard methods of solid phase synthesis and is one of 17 pref. examples of a highly generic formula. The peptide is used to inhibit fibrinogen-induced platelet aggregation and is partic. useful because it does not significantly deplete the count. It has a relatively short duration of activity and is thus useful where prevention of platelet aggregation over a short period of time is desirable, e.g. in aurgery of peripheral arteries and catdiovascular surgery. It is also useful in prevention of platelet thrombosis, thromboembolism and reocclusion either during and after thrombolytic therapy, or after angioplasty of coronary and other arteries and after coronary artery by-pass procedures, or to prevent myocardial confirmators or streptokinase, or anticoagulants. See also AARIO413-18 and activators or streptokinase, or anticoagulants. See also AARIO413-18 and EP-410537, EP-410539, EP-410540, EP-410541, and EP-410767

To residue Cys5 is attached OH. The peptide is prepd. using standard methods of solid phase synthesis and is one of 17 pref. examples of a highly generic formula. The peptide is used to inhibit fibrinogen-induced platelet aggregation and is partic. useful because it does not significantly deplete the platelet count. It has a relatively short duration of activity and is thus useful where prevention of platelet aggregation over a short period of time is desirable, e.g. in surgery of peripheral arteries and cardiovascular surgery. It is also useful in prevention of platelet thrombosis, thromboembolism and reocclusion either during and after thrombolytic therapy, or after angioplasty of coronary and other arteries and after connary attery by-pass procedures, or to prevent myocardial infarction. It may be combined with thrombolytic agents, e.g. plaaminogen activators or streptokinase, or anticoagulants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                agents, e.g. plasminogen activators or streptokinase, or anticoagulants.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             J. Biol. Chem. 261:16704-16713(1986).
-!- FUNCTION: Exhibits unusual shark repellent and surfactant
properties. Forms voltage-dependent, ion-permeable channels
in membranes. At high concentration causes cell membrane lysis.
                                                                                                                                                                                                                                                                                                       28-FEB-2003 (Rel. 41, Last annotation update)

In aqueous solution exists as a tetramer.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the pardaxin family.

"Purification and synthesis of eosinophilotactic tetrapeptides of numan lung tissue: identification as eosinophil chemotactic factor of anaphylaxis.";

"Proc. Natl. Acad. Sci. U.S.A. 72:4123-4127(1975).

"In Proc. Natl. Acad. Sci. U.S.A. 72:4123-4127(1975).

"In MSCELLANEOUS: These peptides are released from mast cells in lung during buring hyptacensity reactions (anaphylaxis). Their activities, preferentially affecting eosinophils, include chemotaxis, chemotactic deactivation, release of enzymes, and stimulation of the hexose monophosphate shunt.

-!- FUNCTION: ACYL-PROTEIN SYNTHETASE ACTIVATES TETRADECANOIC ACID.
IT IS A COMPONENT OF THE FATTY ACID REDUCTASE COMPLEX RESPONSIBLE FOR CONVERTING TETRADECANOIC ACID TO THE ALDEHYDE WHICH SERVES AS SUBSTRATE IN THE LUCIFERASE-CATALYZED REACTION.
-!- CATALYTIC ACTIVITY: ATP + an acid + protein = AMP + diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Achatina fulica (Giant African snail).

                                                                          D-amino acid residue.";
Int. J. Pept. Protein Res. 39:258-264(1992).
-I- FUNCTION: Neuroexcitatory peptide, increases the impulse frequency and produces a spike broadening of the identified heart excitatory neuron (PON); also enhances the amplitude and frequency of the heart beat. Has also an effect on several other muscles.

PIR: A32480; A32480.
Hormone; D-amino acid.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
